

# *Weekly* MORBIDITY REPORT

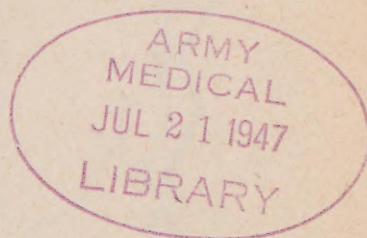

SHORE STATIONS IN CONTINENTAL UNITED STATES

NAVMED 104

WEEK ENDING 15 June 1946

REPORT NO. 233

**RESTRICTED**—THE INFORMATION IN THIS REPORT IS NOT TO BE COMMUNICATED DIRECTLY OR INDIRECTLY TO THE PRESS OR TO ANYONE NOT IN THE ARMED FORCES

# ADMISSION RATES--ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES - 1944, 1945, 1946

CURRENT TRENDS  
Week Ending 15 June 1946

After last week's brief interruption, the downward trend of the admission rate for All Causes was resumed, with a new low level for the year established this week. The current rate is 556, compared with 610 last week and 623 a year ago. Most of the districts shared in the improvement. The only important rise in overall rate is noted in the 6th District, which reports a 22% increase to 808, the highest rate of the week. The 5th and 9th Districts, which had been experiencing the highest rates, show improvements this week of 29% and 13% respectively. The Potomac and Severn River Commands have the lowest rate, 285.

The rate for Total Respiratory Diseases likewise reached a new low for the year, the rate of 96.4 for the current week being 8% below last week's 104.6, and comparing with 164 for the corresponding period in 1945. The 9th District has the highest rate, 173.1, but this is 16% under last week's rate. The 5th District remains second highest with 131.3, but this also is an improvement over the previous week. The Potomac and Severn River Commands, as might be anticipated from the low overall rate, have a total respiratory rate of only 35.8.

CATARHAL FEVER, ACUTE AND INFLUENZA. The rate for these diseases continues its steady downward trend, reaching 42.2 this week as compared with 47.9 last week and 105.3 last year. The 6th District reports an increase of 22% to a rate of 63.5, the highest reported this week; while the 9th District, which had been consistently high, experienced a 40% improvement with a fall in rate to 41.4. The lowest rate of the week is 21.0, reported by the 4th District.

PNEUMONIA BRONCHO AND LOBAR. The current rate for these diseases is 1.8, compared with 1.2 last week and 2.0 a year ago. The highest rate, 5.4, is reported by the 11th District, while four districts report no incidence.

PNEUMONIA ATYPICAL. This week the rate for this disease reached 4.2, a 55% increase over the previous week, and more than double the rate of 2.0 that prevailed a year ago. This decided upswing of the curve brings it back to the level that was current during the past winter, after a remission during April and May. The highest rate, 16.9, is reported by the 11th District, where it represents a 63% increase over the previous week, and is nearly four times the rate of the second highest district. Three districts reported no cases. It is interesting to note that while the rate for total respiratory diseases is now less than half what it was last winter, the rates for all forms of pneumonia have continued near the winter level.

TONSILLITIS AND PHARYNGITIS. The rate for these diseases registered a decline of 8% from 52.8 last week to 48.3 in the current period. A year ago the rate was 55.0. The 9th District reports the highest rate, 130.1, while the Potomac and Severn River Commands are lowest with 12.3.

SCARLET FEVER. The current rate of 4.1 is slightly higher than last week's 3.8, but this is not a significant interruption of the downward trend. The rate a year ago was 8.0. The 9th District is highest, with a rate of 12.1, while seven districts report no incidence.

MEASLES. The reduction in rate for measles continues, with 5.6 for the current week as compared with 6.9 last week and 2.0 a year ago. Only two districts report rates of consequence; the 9th and 11th Districts account for over 90% of all new cases, while eight districts were without any incidence this week.
